

Please do not prohibit XM Radio from brocasting Traffic and weather.I live in southern Calif. and I am employed as a field Pacemaker Representative.My territory takes me from the border of Mexico to Deep into Los Angeles.I relie on the service XM-Radio provides everyday. It is essential for me in planning my traveling routes.

Local radio stations cannot provide this service consistantly for example:  
1) local stations lose reception. Therefore I must change stations contiuously.  
How safe is that. With XM-Radio I`m able to get this critcal info instanly.  
2) local stations have to much fun and games instead of useful information.  
3) inconsistant reporting/updates intervals.  
4)local stations have excessive commericals with makes the consumer wait for critial updates.

XM-Radio is a subscription service that I pay for out of my pocket. If this is reglated/controlled then all other such services should be subjected to this censorship. This means all pagers that provide weather/traffic, all cellphones,all websites that provide this service ect.

Once again please do not restrict a subscription service such as XM-Radio from providing essential info. that nobody else can provide. Satilite is the only option for uninteruped reception across America.
